

# **California Proposal 65, Toxic Substances Control Act Poly Fluoro Alkyl Substance**

Products destined for the North American market, are often required to meet certain legislations, particularly California Proposal 65 (Prop 65), Toxic Substances Control Act (TSCA) and Poly Fluoro Alkyl Substance (PFAS).

We work with suppliers and our customers to manufacture cable assemblies that when required meet the above legislative requirements.

We expect a bill of materials from our customer that has been assessed for compliance to the acts and we then purchase through our supply chain to ensure that parts supplied meet customer requirements.

If a customer cannot provide a certified bill of materials that has been assessed for compliance, we will communicate between our supply chain and customer to evaluate if parts that meet any of the above acts can be procured.
